BODY TRANSFORMATION

At NuSkinnovation, our **ADVANCED BODY TREATMENTS** are designed to target stubborn fat, skin laxity, and cellulite using a combination of clinically proven technologies.

Treatments such as cavitation use ultrasound waves to break down fat cells, while radio frequency works by heating the deeper layers of the skin to stimulate collagen production and improve firmness.

Our Fotona TightSculpting® treatment combines fat reduction with skin tightening through dual-wavelength laser technology, effectively reducing subcutaneous fat while stimulating collagen for firmer skin.

For cellulite and skin texture, Fotona OrangeLase® helps to reduce the appearance of cellulite while improving skin elasticity through deep tissue heating and collagen remodeling.

The number of sessions required varies depending on your body, treatment area, and desired results, and will be determined by your therapist during your consultation.

Treatment packages are available to help you achieve optimal, long-lasting results.

CAVITATION AND RADIO FREQUENCY

Non-invasive body contouring treatments that help reduce stubborn fat, smooth cellulite, and improve skin firmness. Cavitation uses ultrasound waves to break down fat cells, while radio frequency gently heats the skin to stimulate collagen and tighten the area.
